## Original Instructions

### 3. Intended Use

- This compressed air blow gun is used for blowing off and blowing out using compressed air in the professional sector.
- The maximum permitted operating pressure (see tool) must not be exceeded. Operating pressure: 2-6 bar. The tool must not be operated using explosive, inflammable or hazardous gases.
- Any other use does not comply with the intended purpose. Do not modify tool. Use only original Metabo spare parts.
- The user bears sole responsibility for any damage caused by inappropriate use.
- Generally recognised accident prevention regulations have to be observed.

### 4. Safety Instructions

**WARNING** Read, understand and observe all safety notes and instructions prior to using the tool. Always keep these documents within reach during operation.

- The tool must be used by qualified and trained operators only.
- The compressed air tool must not be modified.

**The maximum permitted operating pressure (see tool) must not be exceeded. Operating pressure: 2-6 bar. Keep out of the reach of children.**

- Service and check your tool regularly. Damaged or not correctly functioning parts have to be repaired or replaced.
- Ensure that the workpiece is secured properly to prevent objects from being blown away.
- Ensure that no other people are placed at risk.
- Wear personal protective equipment and always wear safety glasses, respiratory protection and ear protection.
- Risks associated with dust and vapours: Wear protective clothing and a respiratory protection mask when blowing off substances that might pose a possible hazard to your health.
- Compressed air can cause serious injury.
- Never direct the air jet at yourself or other people.
- Hoses that whip about can cause serious injury. Hoses and fixing material have to be undamaged and fixed securely.

- Never carry pneumatic tools by the hose.

1)

2)
